User guide
Study Timer

How to prepare and conduct the Watchtower Study on time

Version 3.1 · November 2026

⚠ Two important warnings

1. **Always conduct from the original publication.** The app shows the paragraphs and questions only to calculate the times. The conductor **must never rely on the content shown in the timer**: to present the material to the audience, always use the **JW Library** app or the printed **Watchtower** magazine.
2. **During the study, use presentation mode.** It is the recommended way to use the timer while conducting, because it avoids distractions: it shows only what you need, with **green**, **yellow** and **red** so you can see at a glance how you are doing for time, and large, easy-to-press buttons to move to the **next paragraph** and to mark **comments** (section 9).

1 What it is and what it does

Study Timer helps the brother who conducts the Watchtower Study to **divide the time well and finish on time**.

You load this week's article as a PDF and the app:

- **Reads the article** and finds the paragraphs, questions, scriptures to be read, pictures, notes and review questions.
- **Calculates how much time** to give each part: the introduction, each paragraph, the review and the conclusion.
- **Guides you during the study** with a timer for each paragraph and colours that show whether you are on time, in grace time or over time.
- **Readjusts itself:** if a paragraph runs long, it shares the remaining time among the following ones so that you finish on time.

> **Unofficial app.** It is a free, independent project. It is not an official publication and has no connection with jw.org or with the organization of Jehovah's Witnesses. The article is analysed on your own device: it is not sent to or stored on any server.

The pictures in this guide use an invented sample article, not a real Watchtower article.

2 Installing the app

Android

Install it from Google Play: search for **"Temporizador de Estudio"** or open this link: play.google.com/store/apps/details?id=com.comangelo.temporizadorestudio

iPhone and iPad

It is not on the App Store yet, but it works just the same from the web and can be added to the home screen:

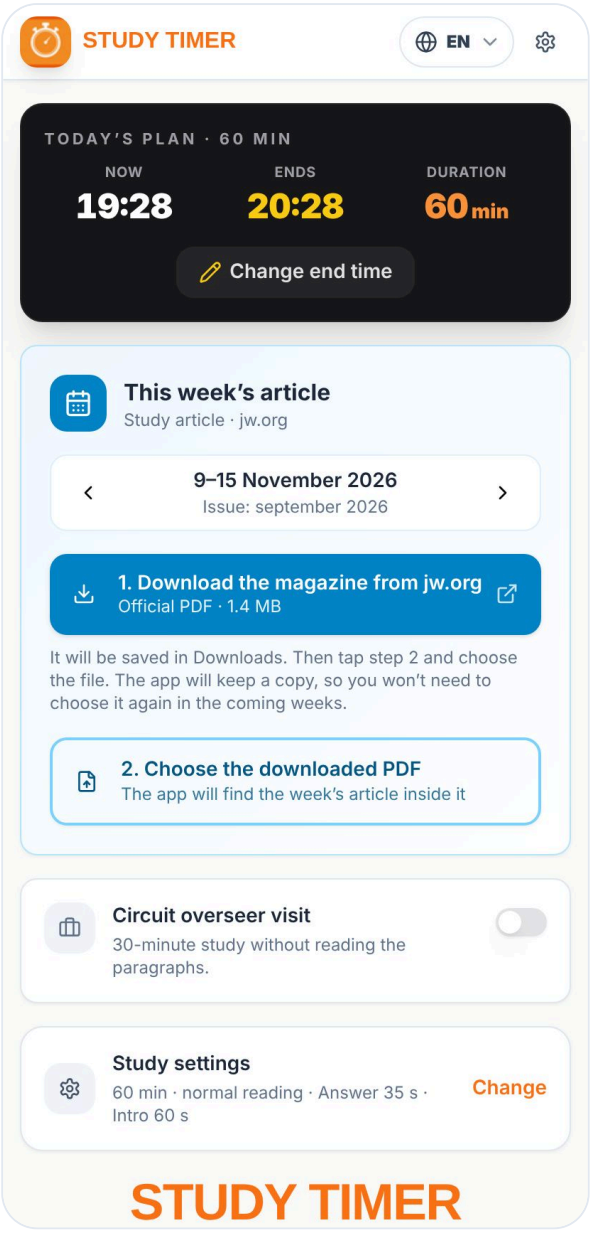

1. Open temporizador-estudio.vercel.app in **Safari**.
2. Tap the **Share** button (the square with the arrow pointing up).
3. Choose **"Add to Home Screen"** and tap **Add**. The orange stopwatch icon will appear.

Computer or tablet

Open temporizador-estudio.vercel.app in your browser. In Chrome and Edge you can install it as an app from the install icon in the address bar.

> **Updates:** when there is a new version, the app shows the message *"A new version of the app is available."* with an **Update** button. It never updates itself in the middle of a study.

3 The home screen

Home screen with today's plan and this week's article.

From top to bottom you will find:

- **Top bar:** the **language** selector (a globe with the code, for example `EN`) and the **settings** button `⚙`. Once an article is loaded, the full-screen, **export** and **start again** buttons also appear.
- **Today's plan:** the current time, the time the study **ends** and its **duration**. With **"Change end time"** you set the finishing time yourself (for example, 8:28 p.m.); the app adjusts the duration.
- **This week's article:** to download the magazine from jw.org and open it in the app (see section 4).
- **Circuit overseer visit:** a switch for the 30-minute study without paragraph reading (section 13).
- **Study settings:** a summary of your settings (duration, reading speed, time per answer and introduction), with a **Change** link.
- **An area to drop the PDF**, for those who already have the file.

4 Loading this week's article

The **"This week's article"** card shows the current week (for example, *November 9-15, 2026*) and the issue of The Watchtower that contains it. With the arrows `‹` `›` you can choose another week.

1. **"1. Download the magazine from jw.org"** opens the official PDF of the matching issue. On Android it is saved in *Downloads*; on iPhone, tap Share → *"Save to Files"*.
2. **"2. Choose the downloaded PDF"**: select that file. The app looks inside the magazine for the article of the chosen week and analyses it.

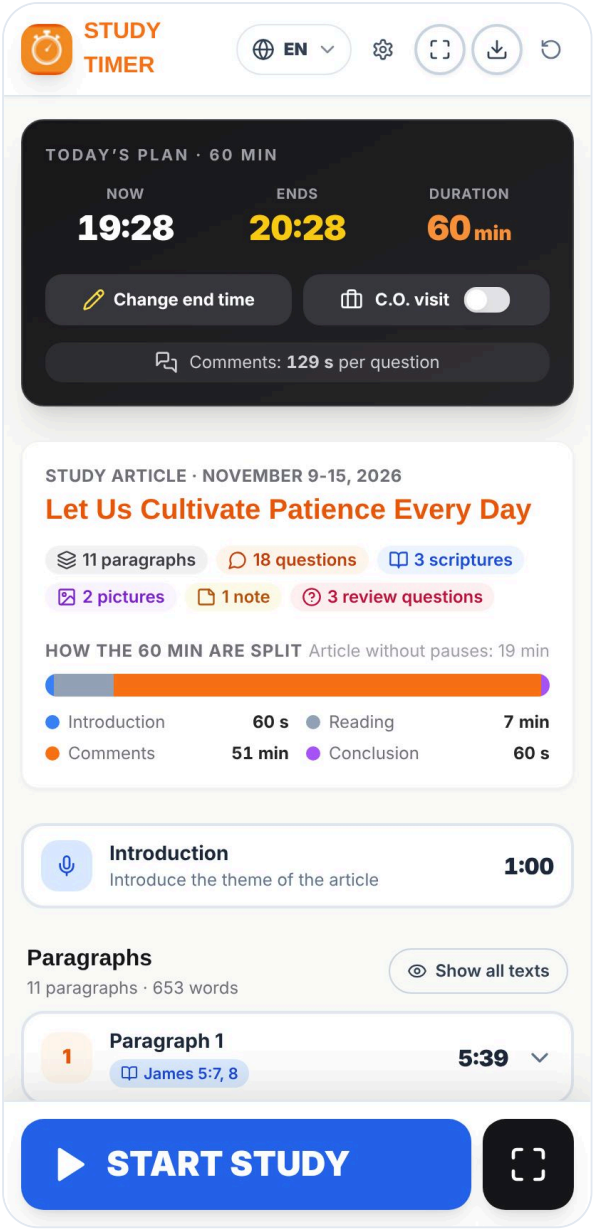

> **The Watchtower is downloaded in the language of the app.** If the app is in English, the English edition is downloaded; if it is in Spanish, the Spanish edition, and so on for every language. To download another language, first change the language of the app (section 14). In Portuguese, the Portugal or Brazil edition is downloaded, depending on what you chose.

The app **keeps a copy** of the magazine. The following weeks of the same issue open directly with **"Open this week's article"**, without downloading anything again. Saved magazines are deleted automatically 3 months after their last week.

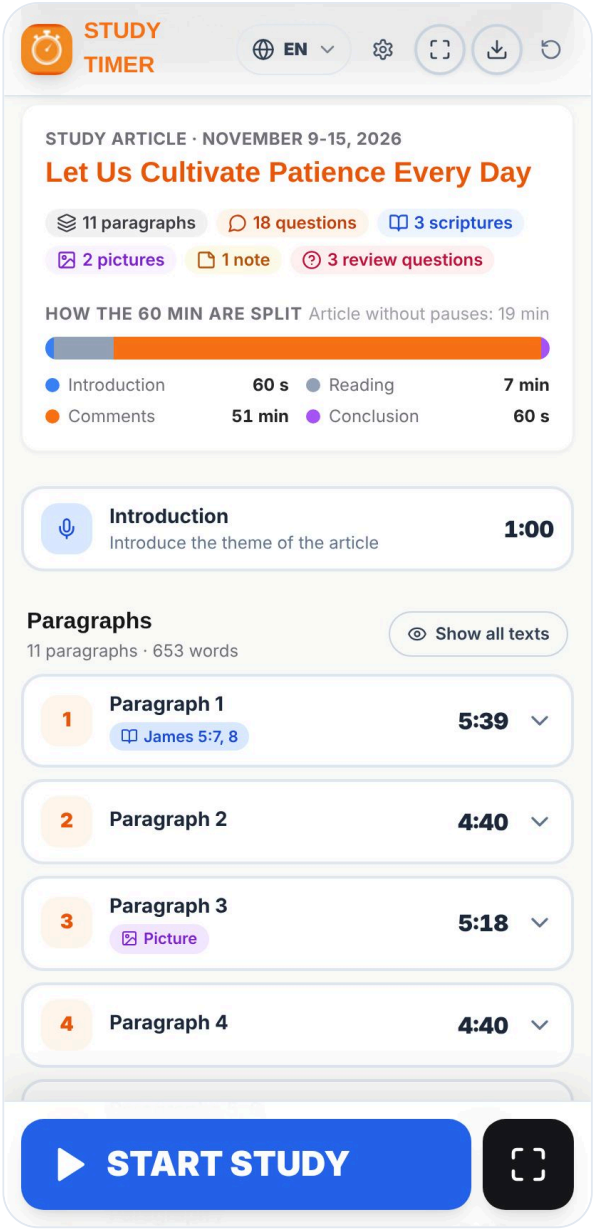

On a computer you can also **drag the PDF** into the area below or choose the **folder where you keep the magazines**, and the app will find them by itself.

> **Does it say the magazine has not been published yet?** jw.org publishes each issue a few weeks in advance. If you choose a week far in the future, it may not be available yet.

5 The summary and the study plan

At the top, today's plan; below it, the article summary.

Summary showing how the 60 minutes are split.

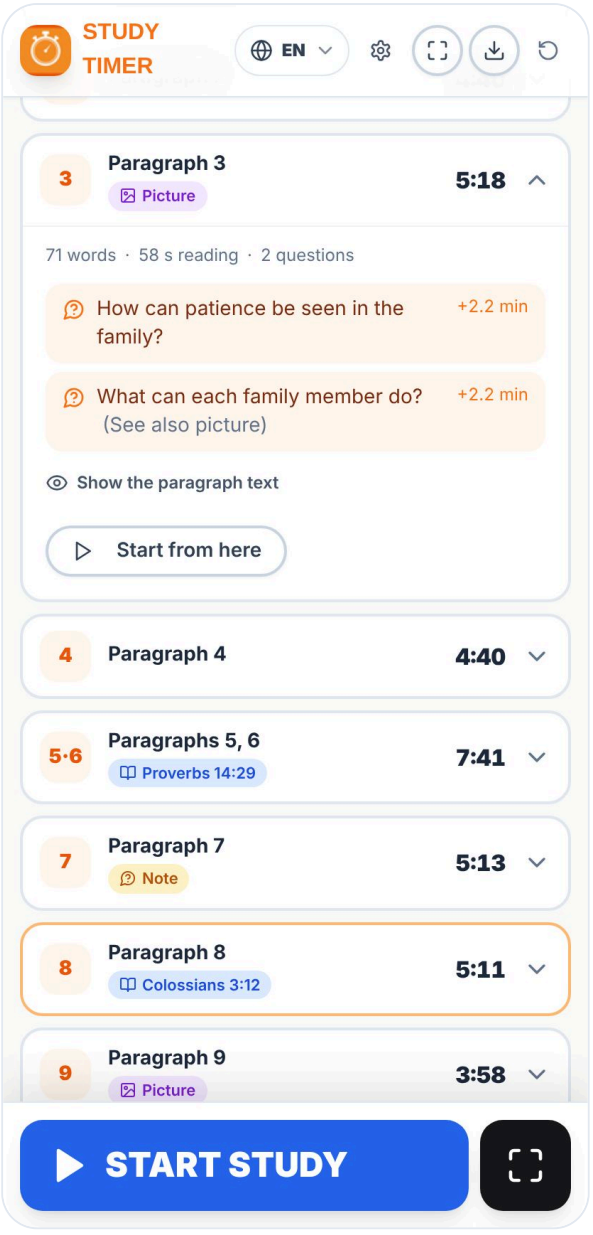

When the article is loaded you will see:

- The **title and week** of the study article.
- **Content tags:** number of paragraphs, questions, scriptures to be read, pictures, notes and review questions.
- **How the time is split:** a coloured bar showing what goes to the **Introduction**, **Reading**, **Comments** and **Conclusion**. It also shows how long the article would take *read without pauses*.

On the plan card, **"Comments: X s per question"** tells you the average time available to answer each question.

If the article is too long for the chosen time, a **“It does not fit”** warning appears with what is missing. You can lengthen the duration or choose a faster reading speed in Settings.

6 The paragraph list

An open paragraph with its question, the picture and the “Start from here” button.

Each paragraph takes one line with its **number**, its **planned time** and the approximate **time of day** at which it should end. The coloured tags point out what to keep in mind:

TAG	WHAT IT MEANS
James 5:7, 8	There is a **scripture to be read**. The exact reference is shown.
Picture	The question refers to a **picture** in the article (“See also picture”).
Note	There is a **footnote** to discuss.
★ Key point	The question mentions a box or a highlighted idea in quotation marks.

Tap a paragraph to **open it**. You will see the words, the reading time, its question and, if it is long, the extra time for more comments. From there:

- **“Show the paragraph text”** shows the full text. **“Show all texts”** opens them all at once. This is only for preparing the times: to conduct, use the original publication (see the warnings at the beginning).
- **“Start from here”** jumps to that paragraph if the study has already begun (for example, if you arrive late). The app counts the previous parts as if they had taken the planned time.

Paragraphs that share a question (for example, **“5, 6.”**) are treated as a group, and the **Next** button skips the whole group.

7 Conducting the study step by step

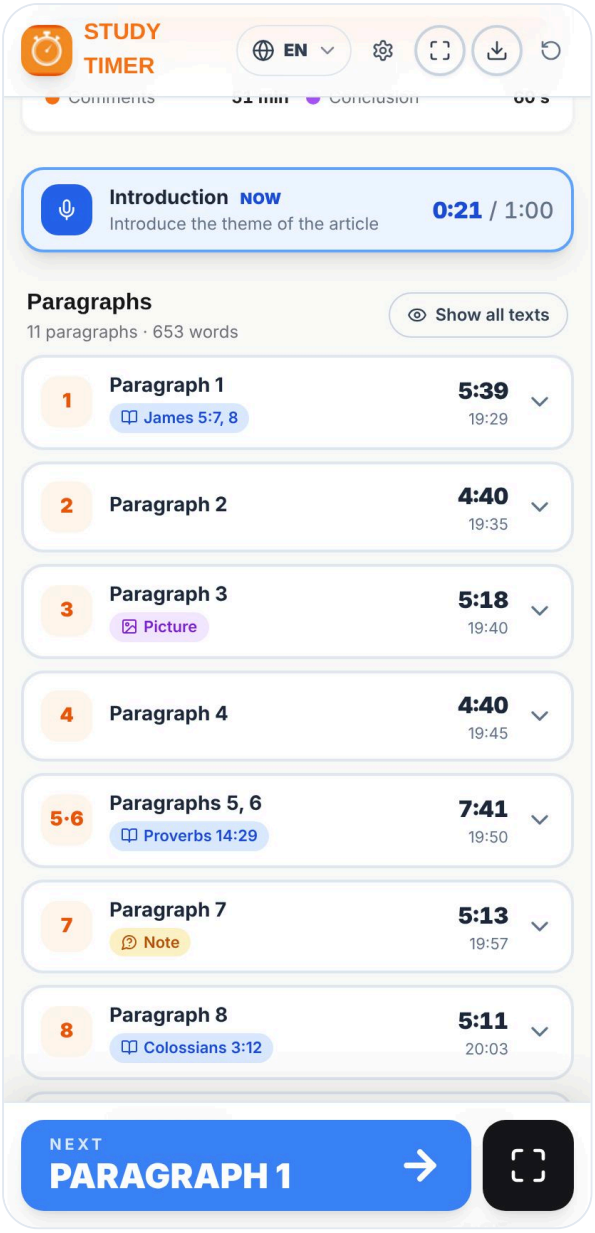

> **Recommended:** during the study, open **presentation mode** (section 9). This section explains how things work in general, which is the same in both views.

On a phone, the main buttons are always at the bottom, in the **bottom bar**:

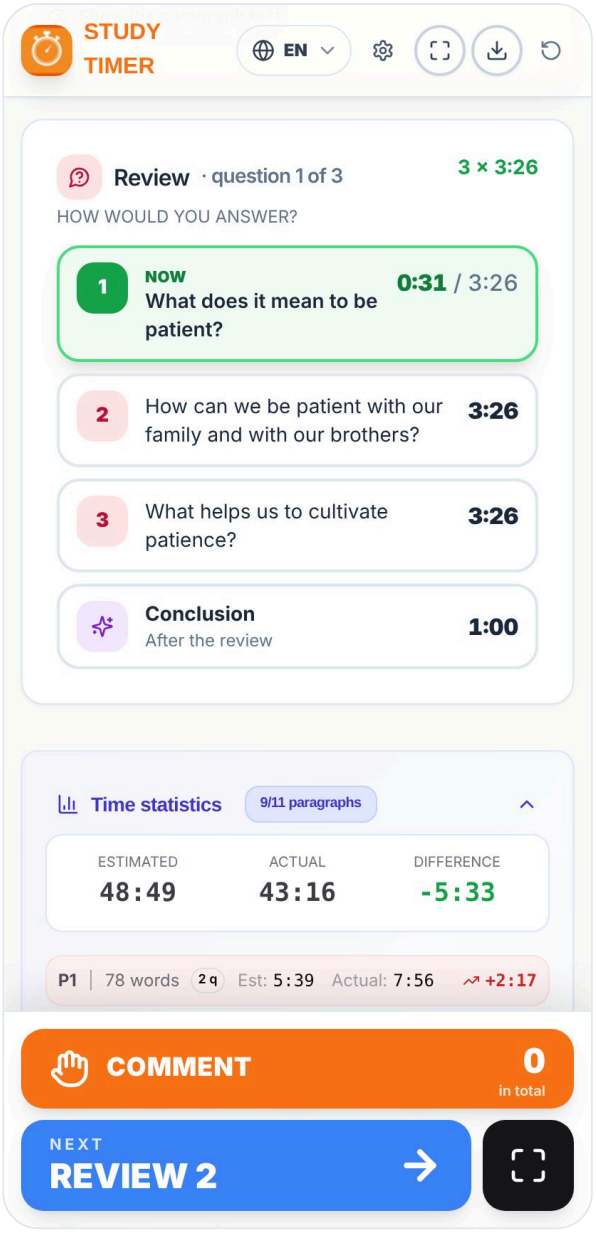

- NEXT the large blue button tells you what comes next: *Start study* → *Paragraph 1* → *Paragraph 2* → … → *Review 1* → … → *Conclusion* → *Finish study*.
- ✋ COMMENT adds a comment to the counter. At the end you will see how many participations there were in each paragraph.
- ⛶ opens **presentation mode** (section 9).

1. **Introduction.** Tap **“Start study”**. The overall timer and the introduction timer start (1 minute by default). The introduction card turns blue.
2. **Paragraphs.** Tap **Next** as each paragraph begins. The current paragraph card shows the elapsed time over the planned time (for example, **1:11 / 5:43**) and changes colour as you go (section 8).

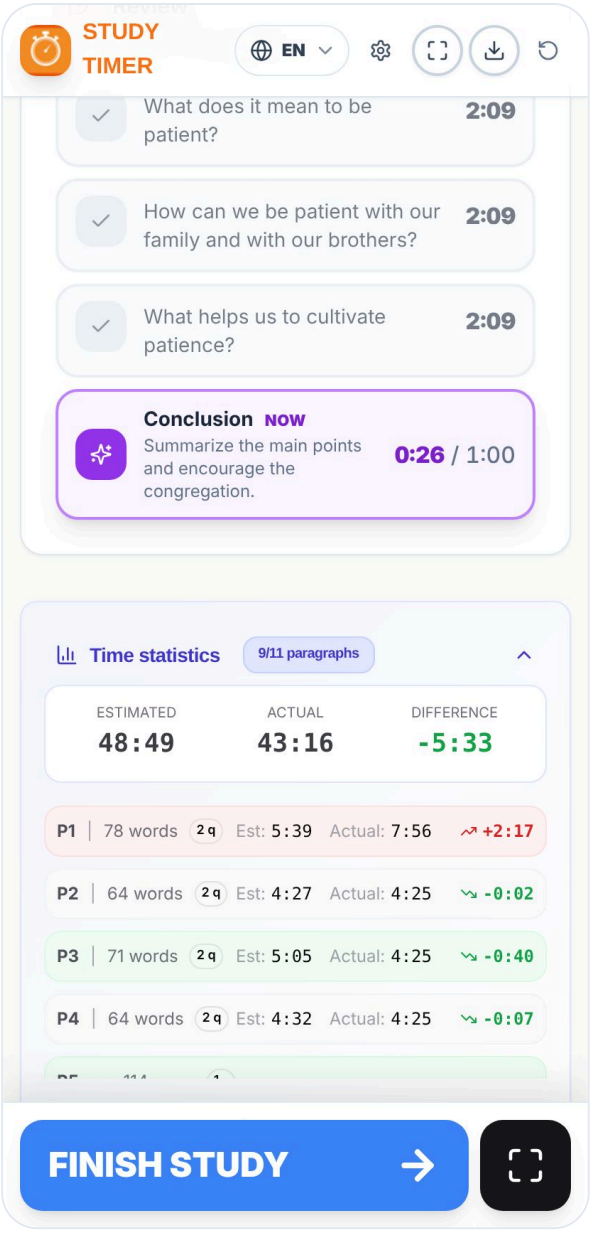

3. **Review questions.** After the last paragraph come the questions in the final box, each with its own time.
4. **Conclusion.** The last part (1 minute by default) to summarise and encourage the congregation.
5. **Finish study.** The timer stops and the statistics are shown.

Introduction in progress.

Review questions: the current one is marked “NOW”.

Conclusion and, below it, the statistics.

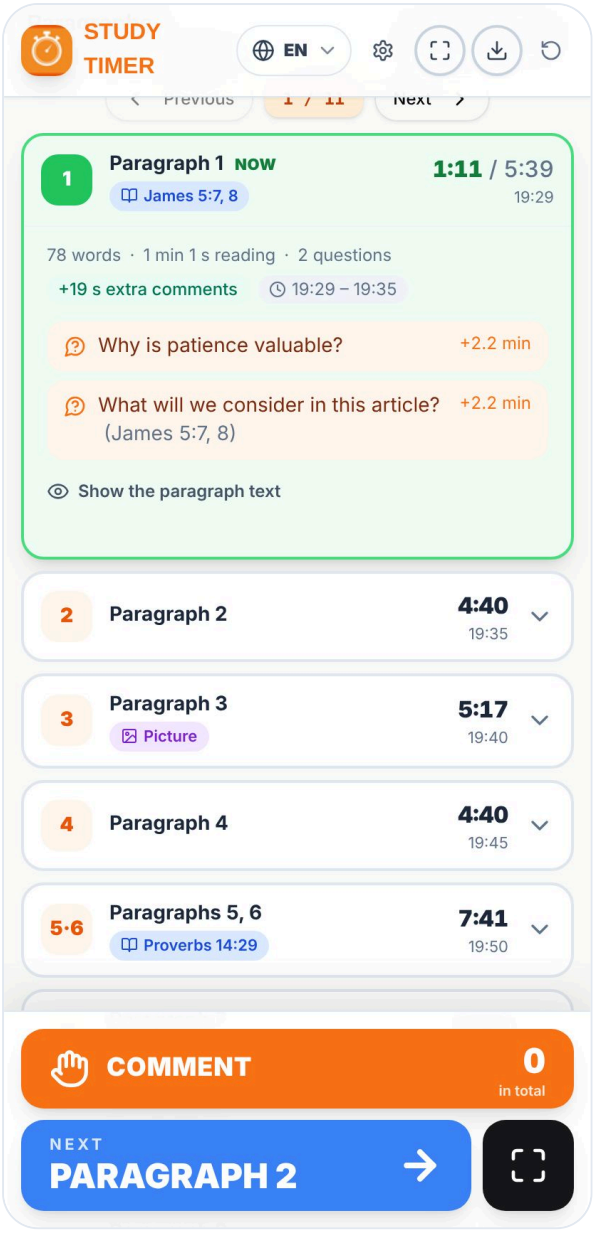

On the plan card at the top you can **pause** and **resume** the study. The message **“Must end in m:ss”** reminds you how long is left until the end time.

> **The screen stays on** while the study is running, so you don’t have to touch the phone. When you finish, the phone turns the screen off as usual again.

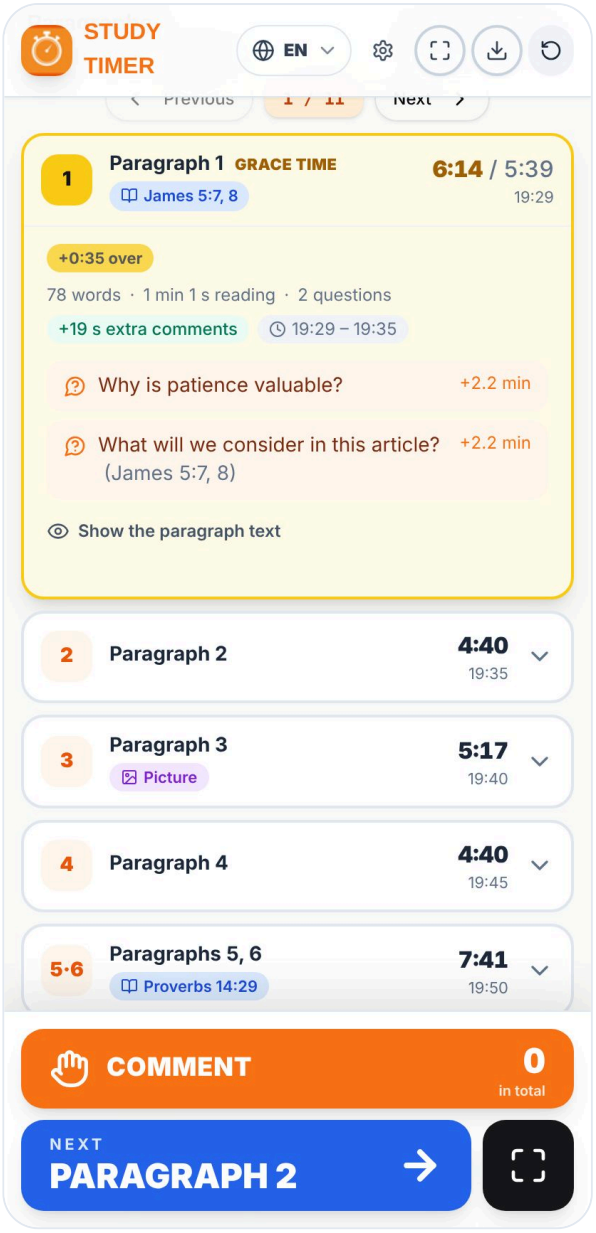

8 The colours: green, yellow and red

The card of what is in progress (paragraph, introduction, review question or conclusion) changes colour according to the time taken:

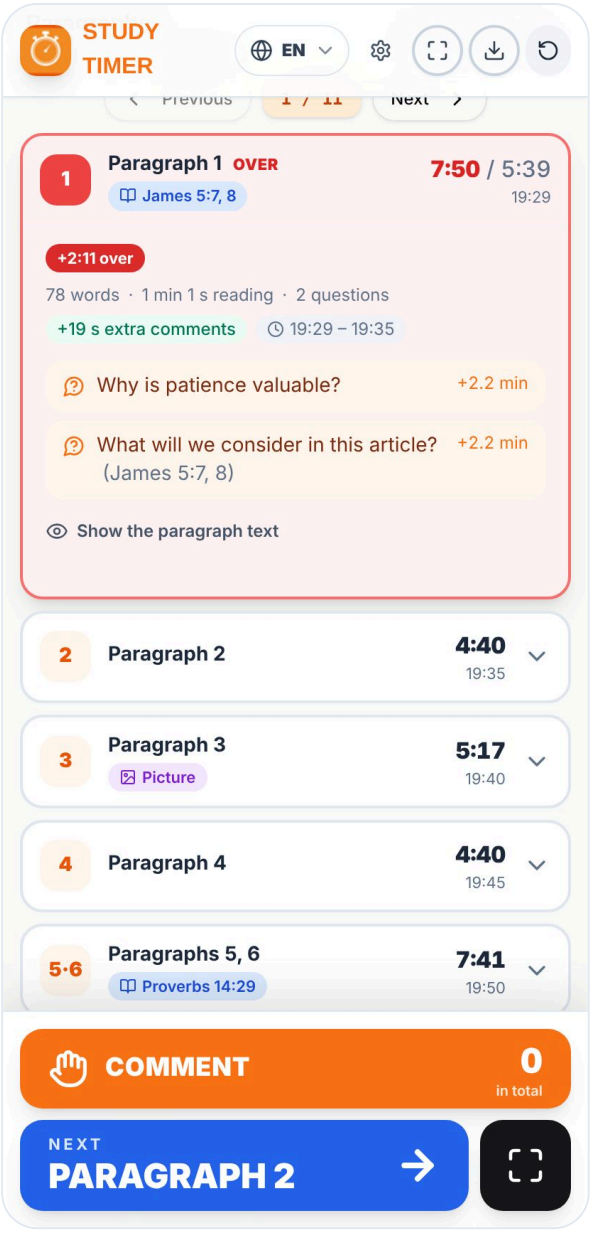

COLOUR	WHEN	WHAT TO DO
ON TIME	Up to the planned time.	All good: keep going.
GRACE TIME	It has gone over its time, but by no more than **30%**.	Start wrapping up the comments.
OVER	More than 30% over the planned time.	Move on to the next paragraph.

On time.

Grace time, showing how much it has gone over.

Over time.

In the last 5 minutes of the study, paragraphs and review questions **have no grace time**: they go straight from green to red, so as not to eat into the time at the end. The **conclusion always keeps its grace time**.

If a part runs long, don't worry: when you tap **Next**, the app shares the remaining time among what is left, so that you finish on time.

9 Presentation mode

> **This is the recommended way to conduct the study.** Presentation mode avoids distractions: it shows only what you need, the green, yellow and red colours tell you at a glance where you are and how you are doing for time, and the **Next** and **Comment** buttons are large and easy to find and press.

Designed for leaving the phone or tablet on the lectern or platform: everything is large and easy to see at a glance. Open it with the ⛶ button in the bottom bar and close it with ✕ (or the **Esc** key on a computer).

At the top it shows the **current time**, the time the study **ends** and the **remaining** time, with a progress bar. In the middle, what is in progress with its timer and colour, and the tags (for example, *Read James 5:7, 8*). At the bottom, the **Comment** and **Next** buttons.

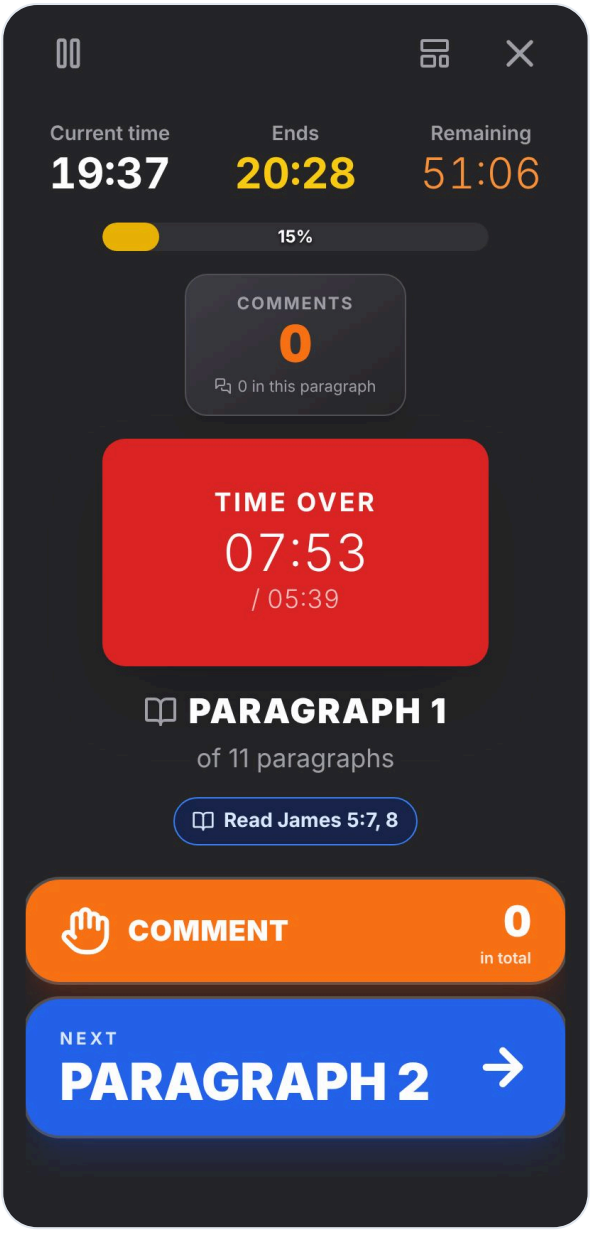

There are **three layouts**. Switch between them with the layout button ▦ (top right) or in Settings → Display:

Tidy panel: dark, with a large coloured box.

Traffic light: the whole screen changes colour.

Classic: the original layout, with the participation counter.

In presentation mode, the **large button** moves through the study by itself: *Start study → Go to paragraph 1 → Next paragraph → Review question → Go to the conclusion → Finish study*. In the last 5 minutes, a warning appears that it is time to finish.

10 How the times are calculated

1. **Reading of each paragraph** = its words ÷ the reading speed (150, 180 or 210 words per minute), plus the **time per answer** you choose in Settings (**minimum 30 seconds**; 35 by default) for each scripture to be read, picture, note or key point. If the conductor wants more time to discuss them, he can raise the time per answer. The reading is never shortened or lengthened.

2. **Introduction and conclusion** always have the time you set in Settings reserved for them (1 minute each by default).

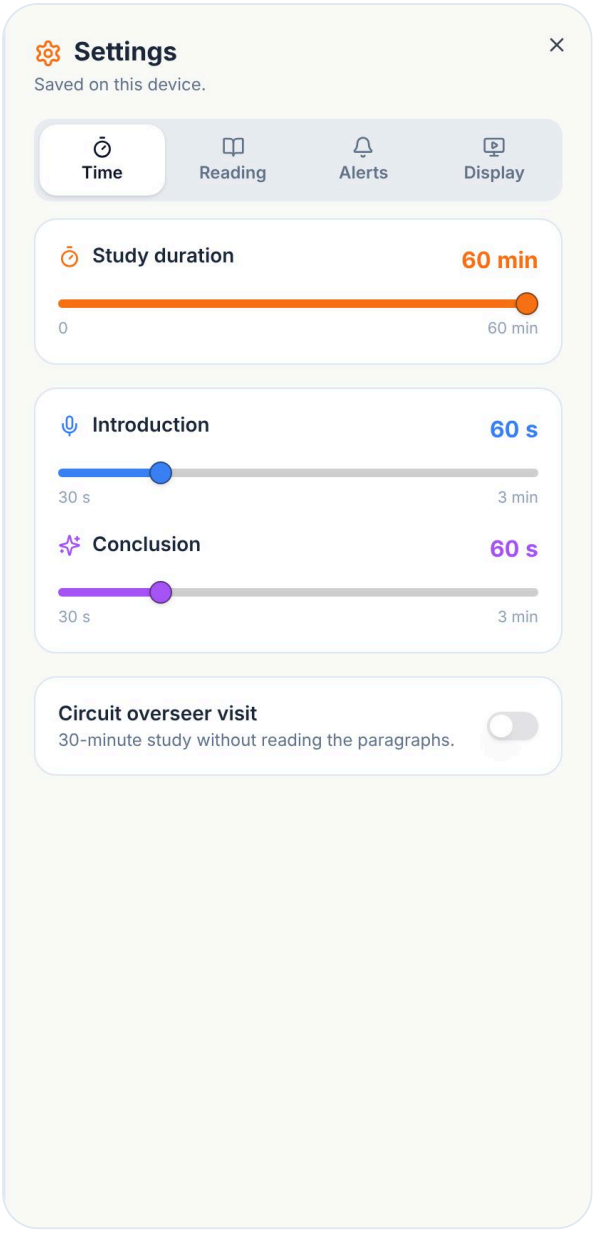

3. **Comments:** the remaining time is shared among all the questions (paragraph and review questions). **Long or grouped paragraphs** get a little more time for comments, according to their length.

4. **During the study:** the plan of the part in progress does not change. Each time you tap **Next**, what is left is recalculated with the time available until the end time, keeping the conclusion reserved.

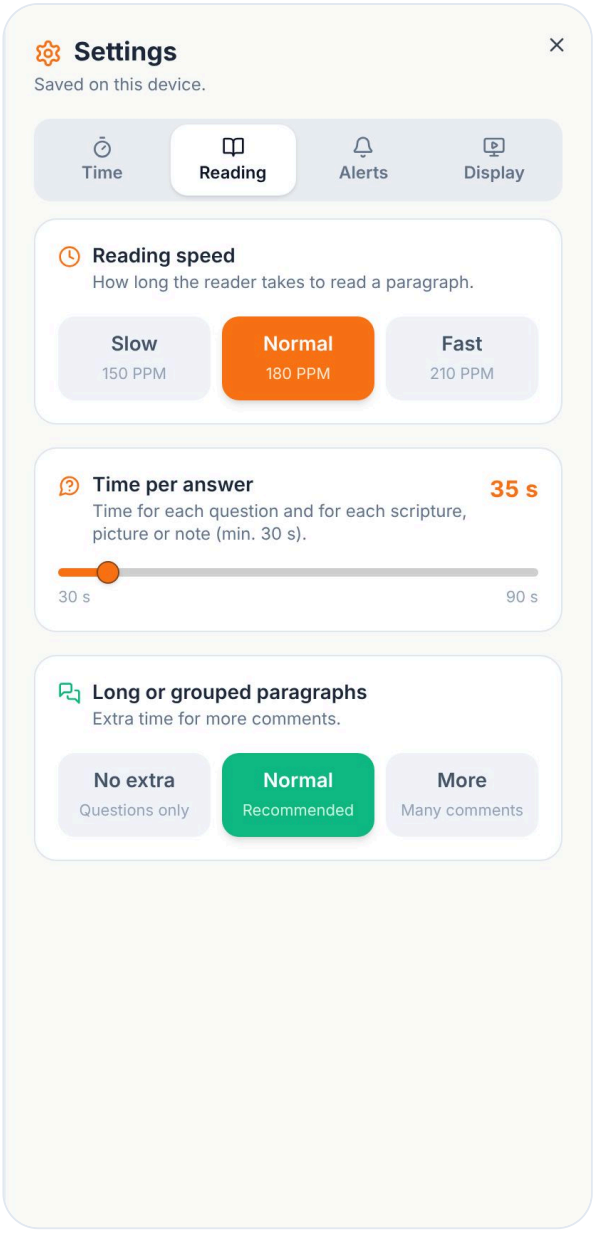

> **Example** (the article in the pictures): in a 60-minute study with 11 paragraphs and 21 questions (18 for the paragraphs and 3 for the review), with the time per answer set to 35 seconds, about 7 minutes are reading, 2 minutes are introduction and conclusion, and about 51 minutes are comments, which gives a little over 2 minutes per question.

11 Settings

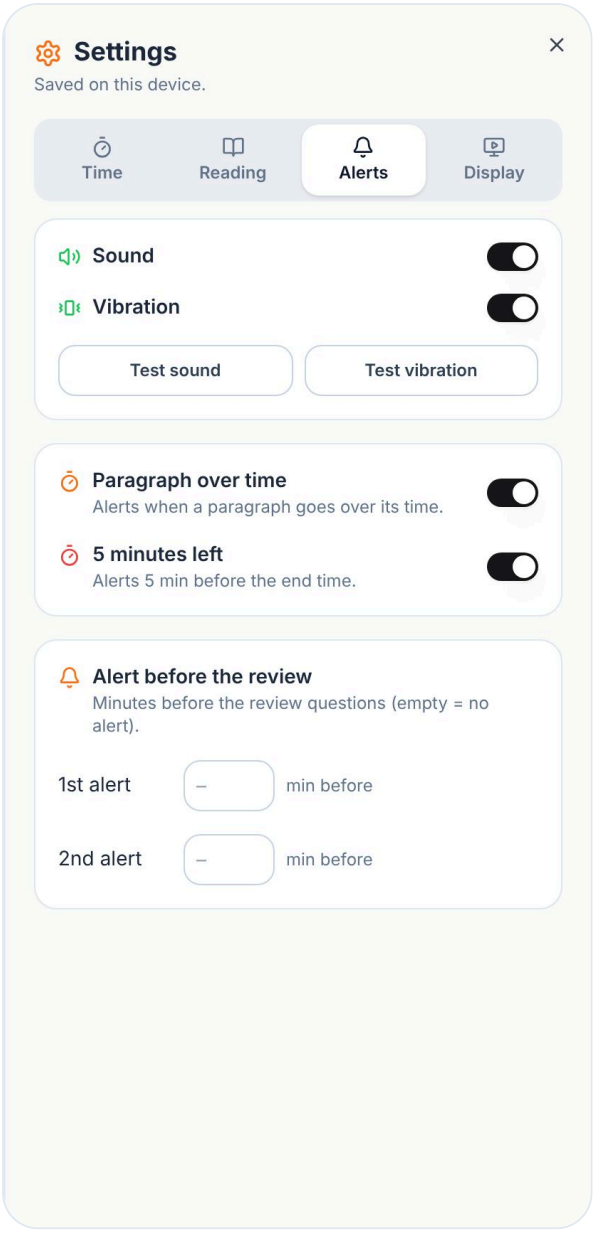

Tap ⚙ at the top right. Settings are saved on your device and are organised in four tabs:

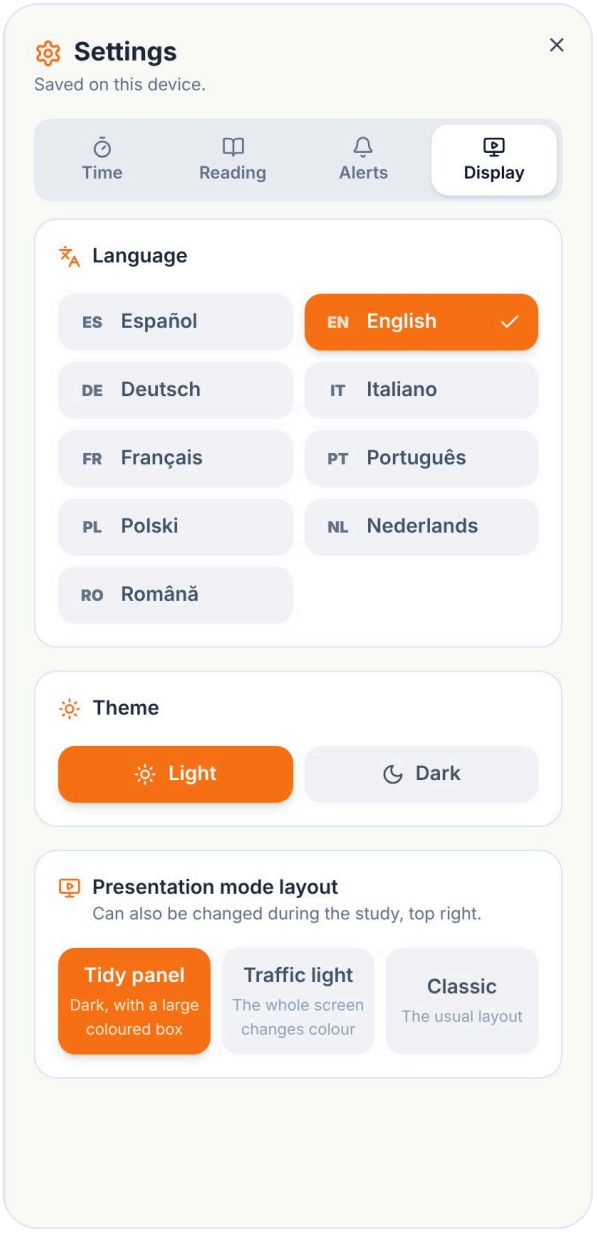

Time

Reading

Alerts

Display

TAB	WHAT YOU CAN CHANGE
Time	Study duration (up to 60 min). Duration of the **introduction** and the **conclusion** (30 s to 3 min). Circuit overseer visit.
Reading	The reader's **reading speed**: Slow (150), Normal (180) or Fast (210 words/min). **Time per answer** (30 to 90 s; also used for each scripture, picture, note or key point). **Long or grouped paragraphs**: No extra, Normal or More comments.
Alerts	Sound and vibration (with buttons to test them). **Paragraph over time** alert, **"5 minutes left"** alert and up to two **alerts before the review**.
Display	**Language**, light or dark **theme** (with four dark variants) and the **presentation mode layout**.

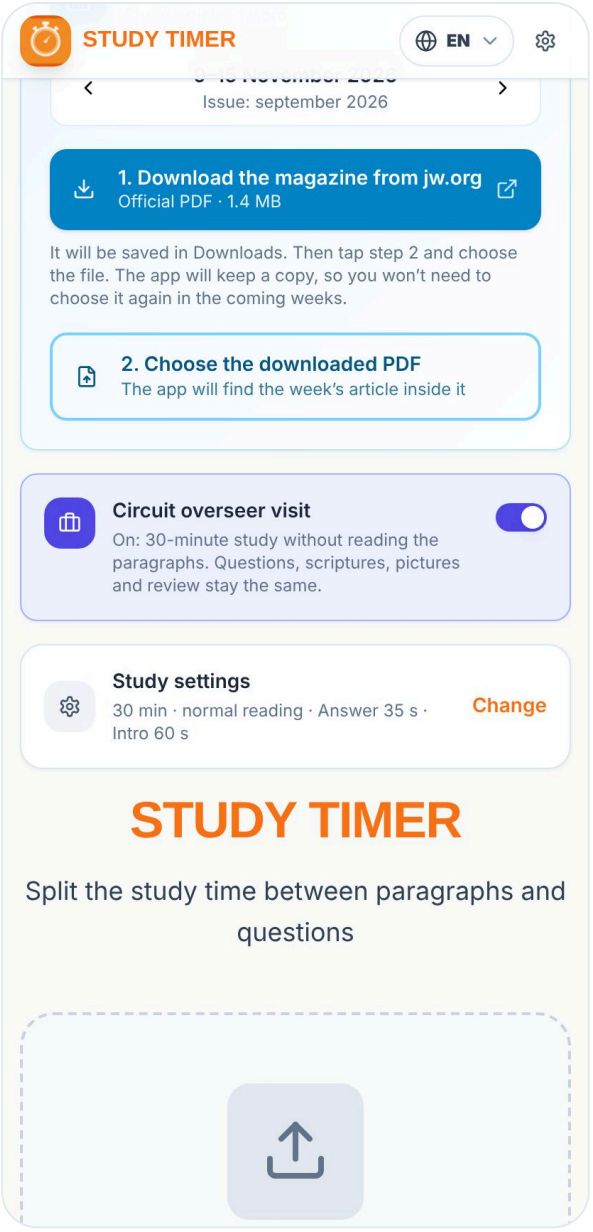

If you change the reading speed or the time per answer while the study is running, it will apply to the next study.

12 Sound and vibration alerts

- **Paragraph over time:** sounds when the current paragraph goes over its time.
- **5 minutes left:** 5 minutes before the end time, with sound, vibration and an on-screen message.
- **Before the review:** enter how many minutes before the review questions you want an alert (for example, 10 and 5). Leave it empty if you don't want one.
- **Little time for the review:** if less than 20 seconds per review question are left, the app warns you.

Make sure the phone is not on silent if you want to hear the alerts. Vibration works on Android; on iPhone it depends on the browser.

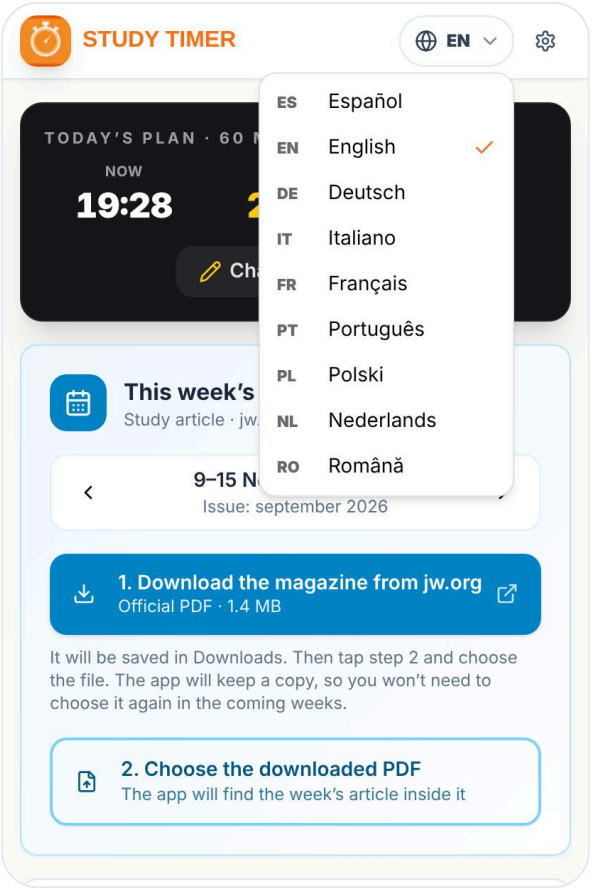

13 Circuit overseer visit

Switch on: 30-minute study.

In the week of the visit, turn on the **"Circuit overseer visit"** switch on the home screen (or in Settings → Time). The study then lasts **30 minutes** and **the paragraphs are not read**: the questions, scriptures, pictures and review remain. Remember to turn it off after the visit.

14 Languages

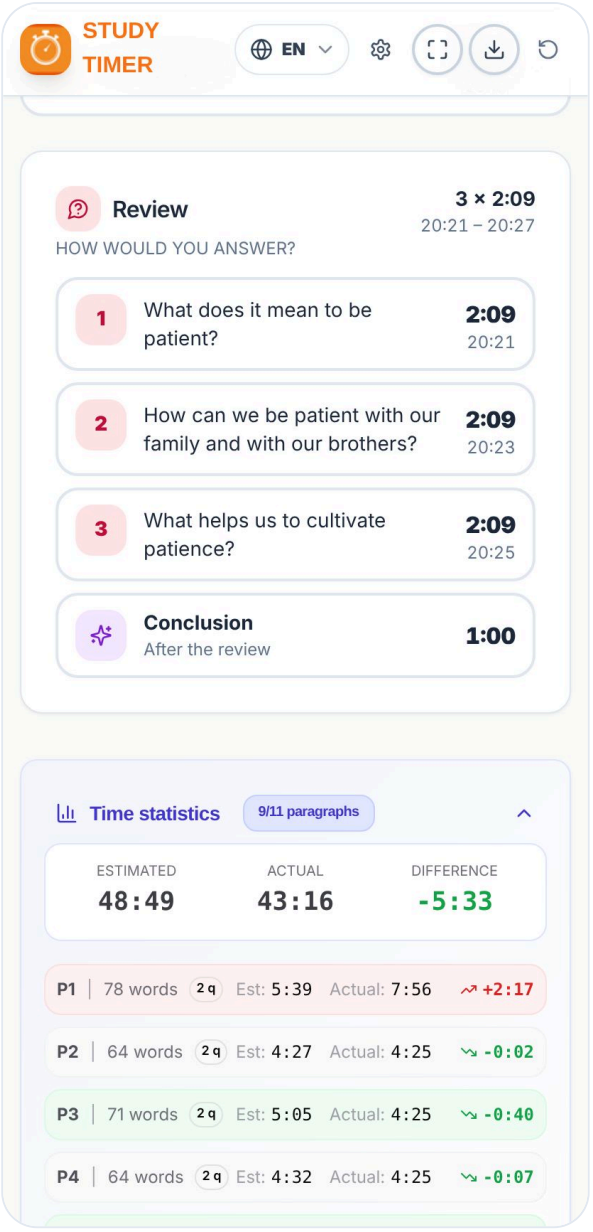

Language menu.

The app works in **Spanish, English, German, Italian, French, Portuguese, Polish, Dutch and Romanian**. Change the language with the globe button at the top or in Settings → Display. When you change the language:

- The whole app appears in that language, with its dates and times.
- The jw.org button downloads **The Watchtower in that same language**. The language of the app decides the language of the magazine.
- In **Portuguese**, the app asks once whether you prefer the **Portugal** or the **Brazil** edition. You can change it later in Settings → Display.

This guide is also available in all these languages: use the language buttons at the top.

15 When you finish: statistics and export

Time statistics for each paragraph.

Time statistics compare the **estimated** time with the **actual** time for the whole study and for each paragraph, with the difference in green (faster) or red (slower) and the marked comments. They help you see which parts ran long and adjust next time (for example, the reading speed).

With the **export** button ⬇ in the top bar you can save the study plan as an **image (PNG)** or as a **PDF**, to print or share it.

To prepare another study, use the **start again** button ↻.

16 Frequently asked questions

Can I conduct by reading the paragraphs and questions in the app?

No. The app shows them only to calculate the times. To conduct, always use JW Library or the printed Watchtower magazine.

Why was The Watchtower downloaded in another language?

The magazine is downloaded in the language of the app. Change the language with the globe button and tap “Download the magazine from jw.org” again.

It says it doesn’t recognise the article format.

Use the official PDF of The Watchtower, study edition, downloaded from jw.org (the “Download the magazine from jw.org” button does it for you). Scanned PDFs or PDFs made from screenshots cannot be read.

It can’t find this week’s article in the magazine.

Check that the chosen week belongs to that issue of the magazine. If not, the app shows the closest article and lets you choose another week.

Do I need the internet during the study?

Only to download the magazine. Once the article is loaded, the timer works offline.

I arrived late or started late. What do I do?

Open the paragraph you are on and tap “Start from here”. The app will share out the remaining time.

I want to finish at an exact time.

Use “Change end time” in today’s plan and enter the time. Everything is calculated to finish at that time.

The alerts don’t sound.

Check in Settings → Alerts that they are turned on, tap “Test sound” and make sure the phone is not on silent.

What data does the app store?

Only your settings and the magazines you choose to keep, and always on your device. There are no accounts and no data is sent to any server. More information in the privacy policy.
